Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 March 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

1. Applicant's election with traverse of 1-3, 8, and 12 in Paper No. 12 is acknowledged. The requirement is deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Allison.

The patent to Allison shoed a sprayer system comprising:

- a container 30;
- an outlet valve 36 connected to the container selectively permitting fluid flow from the container through the outlet valve;
- a spray assembly connected to the container, the sprayer assembly including a venturi 84; and
- a plunger 72 fluidly connected to the venturi and movable between a closed position and an activating position in response to a flow through the venturi;
- wherein the venturi creates a positive pressure and the positive pressure is exerted on the top side of the plunger (see Figure 2) and the venture creates a reduced pressure and the reduced pressure is exerted on the bottom side of the plunger in response to a flow through the venturi (see Figure 2) as recited in claims 2 and 3.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim ~~12~~⁸ is rejected under 35 U.S.C. 103(a) as being unpatentable over Allison. Allison discloses the instant invention except for the flow rate as recited. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the flow rate as recited, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art.

6. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Allison in view of Wei.

The patent to Allison discloses a method of spraying comprising providing a sprayer assembly having a venturi 84, actuating a valve 72 connected to an additive source in response to a flow through the venturi, and entraining additive from the additive source in the flow through the venturi. Allison does not disclose a hand operated pump. The patent to Wei teaches a spraying system comprising a hand operated pump to provide cleaning fluid to the spray nozzles. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Allison by providing a hand operated pump as taught by Wei in order to be able to control the flow of fluid to the spraying apparatus.
